# Rotating Injection Sites

The rotation guide shown below will help you vary your injection sites as needed. You should always write down the date and location of each injection. The Injection Site Rotation Journal will help you keep track of your injections and make sure you've completed a full cycle.

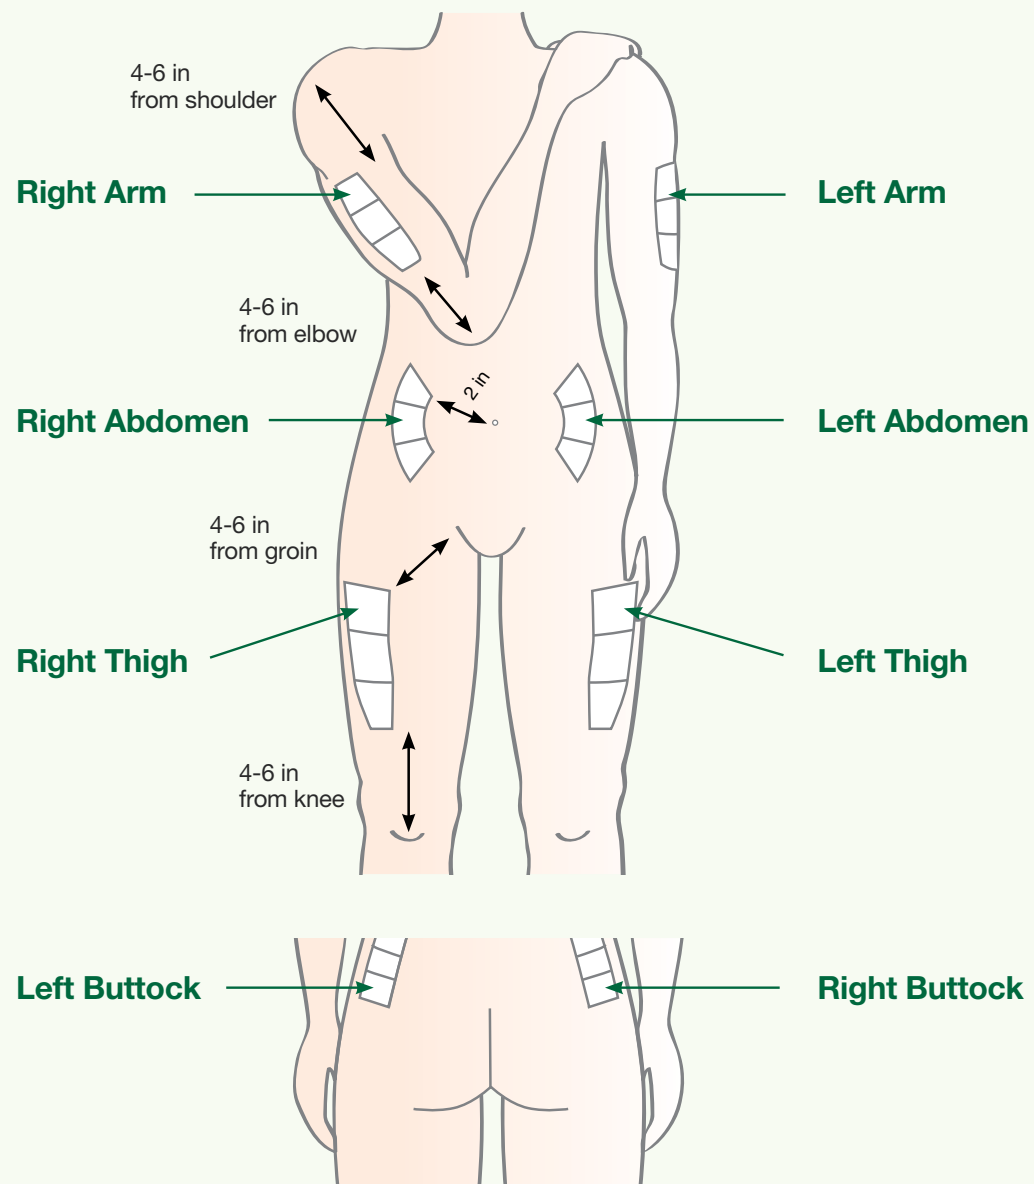

A full cycle consists of 8 injection areas. Each area is further subdivided into top, middle, and bottom for a total of 24 injection sites. Following this sequence will give each site a chance to fully recover. The 8 injection areas are:

- Right abdomen
- Right thigh
- Left abdomen
- Left thigh
- Left arm
- Left buttock
- Right arm
- Right buttock

You should not choose the same area for two injections in a row. If one of your injection sites becomes swollen and painful, the area looks infected or does not heal within a few days, the area has fluid draining from it, or you notice any breaks in your skin or blue-black discoloration of your skin along with a break in your skin, call your doctor or nurse and talk to them about choosing other injection sites.

Please see accompanying full Prescribing Information.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit [www.fda.gov/medwatch](http://www.fda.gov/medwatch) or call 1-800-FDA-1088.
